

**www.holyhealthy.com** has been interrupted and taken down deliberately in December 2006. What happened to Freedom of Speech? If you want a dvd of the site, please email [danah@jrgenius.com](mailto:danah@jrgenius.com)

# Dangerous Suppression! Education System Is Lying! Website Taken Down Repeatedly

or call 416-419-9023. **330 DVD's of holyhealthy.com were distributed to Catholic high school students in York Region in Nov. 2006.**

The teenagers must expose the horrific corruption that OECTA and the York Catholic District School Board keep concealing, to protect their **Demonic, Deceptive, Dangerous, New World Order, House of Cards-School system.** Detailed lists of "who knows what" about the **NEW WORLD ORDER, MIND CONTROL, RITUAL ABUSE,** and the truth about what really is going on in the **MATRIX** that we all live in, are found on [www.holyhealthy.com](http://www.holyhealthy.com). If we stop running and take back our country, then we have a

fighting chance of survival and peace on our planet. **WAKE UP!**

If we continue to keep our heads in the sand, then prepare for **Armageddon.**

**SPEAK UP AND LET THE TRUTH SET US FREE. We must choose the Aquarian Age of Freedom, Peace, Love and Integrity.**

Most of us don't believe that we have the power to make a difference. **WE DO! WE MUST! NOW!** York Catholic Board and OECTA will not do anything to expose the dangerous suppression that they have been concealing since at least 2003.

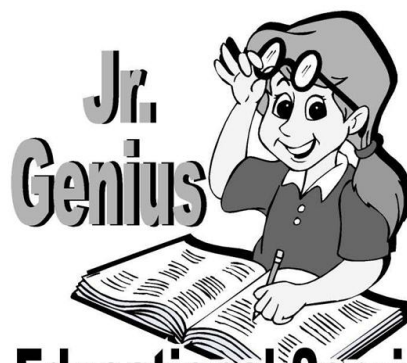

The York Catholic Board's response to the Holyhealthy.com DVD's (after they

were left for students on the morning of Nov 23,2006) was an express mailed letter warning me about trespassing on York Catholic school property.

There was no mention of the **330 holyhealthy.com dvd's** that were left on 11 York Catholic High school properties and distributed to Catholic students off the property.

Nor was there mention of the many flyers that were posted about the **DANGEROUS SUPPRESSION** that holyhealthy.com exposes.

**2007 is a make or break year. Either we wake up and take our freedoms back or allow these CRIMINALS to complete the New World Order**

# How Quickly Are Animals/Plants Disappearing?

**The Big Question: How quickly are animals and plants disappearing, and does it matter?**

By Steve Connor, Science Editor

Why are we asking this question now?

As 2006 drew to a close, the polar bear was about to be classified as a threatened species by the United States Government. Melting Arctic sea ice could significantly reduce numbers of the world's largest terrestrial carnivore over the next 50 years. And, just before Christmas, a 38-day search for the Yangtze River dolphin ended without finding a single member of the species. It is feared that the aquatic mammal may be the latest in a long line of extinct animals.

Extinction is as old as life on Earth - about 3.5 billion years - but scientists calculate that we are losing species at a rate of somewhere between 1,000 and 10,000 times higher than the natural "background" rate of extinction. This means that technically we are going through a period of "mass extinction", the sixth that we know about over the hundreds of millions of years of the fossil record. But unlike the previous five mass extinctions, this one is largely caused by the actions of a single species - Homo sapiens.

How many species have gone extinct in the past 100 years?

This is a notoriously difficult question to answer, due in part to the difficulty in recording the declining populations of a particular animal or plant, and in part to the technical definition of an extinction. Experts estimate there are 15,589 species threatened with extinction. But a species is only accepted to have become extinct if exhaustive surveys in its known habitat range have failed to find any record of the individual.

So even if scientists strongly suspect that an animal has gone extinct it cannot be defined as

extinct until some time has elapsed since an individual was last observed - which can mean 30 or 50 years for some species.

The decline and eventual extinction of an animal or plant may take many decades or even centuries and the final stages are seldom observed. This makes it difficult to decide when something has completely died out.

Conservationists calculate that since 1500 there have been more than 800 recorded extinctions. However, the true number of extinctions is likely to be much larger because of what is known about the rate at which habitats are being lost or broken up.

What groups of animals or plants are at the highest risk?

In general, the more we know about a particular group of species, the more we realise that they are at risk. One in four mammals and one in every eight birds is threatened. Half of all tortoises and freshwater turtles are similarly endangered.

Amphibians - frogs, toads, newts and salamanders - are perhaps the largest group of animals at serious risk.

About one in three species of amphibians are seriously endangered in some way or other and more than 120 species are thought to have died out over the past 25 years.

Amphibian specialists believe that a combination of factors may be involved, such as habitat loss and the spread of a deadly fungus, aided by the human trade in an African toad, a known carrier of the disease.

Up to 2,000 species of amphibians - the first vertebrates to conquer the land - are classified as endangered. The group is thought to be particularly vulnerable because their life cycles generally depend on two habitats, terrestrial and aquatic, for survival.

How many species are still alive? Again, this is another notoriously difficult

question. About 1.5 million animals and plants have been identified and formally or informally named. However, the true number of species alive today is likely to fall within the range of between five million and 15 million, although some scientists suggest even higher numbers - perhaps 30 million species in total.

According to studies of the fossil record, which gives a good indication of the diversity of life on Earth over the past 600 million years, only between about 2 and 4 per cent of the species that have ever lived are believed to survive today - the disappearances of the earlier species occurred long before the arrival of the first humans some two million years ago.

Do species have a natural 'lifetime'?

Some species are better than others at surviving for long periods of time. Some adapt to changing environmental conditions and evolve into new species.

Most species eventually become extinct. Animals without backbones, the invertebrates, have an average evolutionary "lifetime" of five to 10 million years. Mammals, on the other hand, are thought to have a lifetime of one or two million years.

However, scientists say that the current lifetimes of some birds and mammals are much shorter than natural lifetimes based on the fossil record. One scientist calculated that the lifetime of a typical bird or mammal species is now about 10,000 years - significantly shorter than the natural average lifetime.

What caused the previous mass extinctions?

We know about the previous five mass extinctions from the fossil record. Studies of the number of marine families over the past 600 million years show five points in time when large numbers of species disappeared abruptly.

The last was 65 million years ago, in which the dinosaurs became extinct, and is thought to have resulted from an asteroid hitting the Earth and causing a dramatic change in the climate. In fact all previous mass extinctions are thought to have been caused by some large-scale geo-physical process, such as su-

cluding video footage of Bangladeshi UN workers allegedly having sex with three young girls.

Stating that such events are ultimately the work of "a few bad apples", a UN spokesperson promised that they will be thoroughly investigated. Over the past few years, however, there seems to have been a hell of a lot of rotting fruit in the UN barrel.

Last November a BBC Investigation found that children as young as 11 have been subjected to rape and prostitution by United Nations peacekeepers in Haiti and Liberia. A previous BBC investigation in Liberia discovered systematic abuse, involving food being given out to teenage refugees in return for sex.

In both instances the UN

# U.N. Child Sex Slave Scandals

**Wave after wave of child abuse reports pour forward from all over the globe**

Steve Watson Infowars.net

The UN is to investigate itself again after it was revealed by the London Telegraph today that more than twenty different cases of child sex slavery involving UN staff have been reported in southern Sudan.

The Telegraph reports that it has learned of dozens of victims' accounts claiming that some peacekeeping and civilian staff based in

Following information printed in *Toronto Street News* on how a U.S. /Israeli bulldozer ran over and killed Rachel Corrie who was protecting Palestinian homes — *Toronto Street News* was harassed and lied to.

Lies about Corrie being 'used' by terrorists was the excuse. Today, facts regarding the play 'Corrie' are also suppressed.

Unfortunately, we have to warn budding journalists that it is not appropriate to write about news stories unless they are vetted by the Bluma Appels of Canada or else you will be fired from your job.

**'Corrie' canceled in Canada**

Play has potential to offend Jewish community

the town are regularly picking up young children in their UN vehicles and forcing them to have sex. The Telegraph states that it is thought that hundreds of children may have been abused.

The UN has up to 10,000 military personnel in the region, of all nationalities and the allegations involve peacekeepers, military police and civilian staff.

The Telegraph also states that the Sudanese government, which is deeply opposed to the deployment of UN troops to Darfur, has evidence of child sex slavery, in-

# Play Cancelled Following Harassment Against Street News

It's curtains for "My Name Is Rachel Corrie" in Canada.

CanStage, the country's largest not-for-profit theater, has changed its opinion and decided not to present the show as part of its 2007-2008 season.

Play, about the 23-year-old American activist who died under the wheels of an Israeli bulldozer in 2003, was originally produced at London's Royal Court Theatre in 2005.

When James Nicola programmed it this year for the N.Y. Theatre Workshop, pressure from Jewish board members caused him to cancel

the show. It was eventually produced Off-Broadway, where it ran from Oct. 15 to Dec. 17.

"It didn't seem as powerful on the stage as it did on the page," said artistic producer Martin Bragg after seeing the production at Gotham's Minetta Lane Theater.

But in a situation eerily similar to the one that faced Nicola, it appears that pressure has been brought upon Bragg from some of his board members not to alienate the Toronto Jewish community.

Jack Rose, from the CanStage board --

pervolcanic eruptions or the sudden release of vast quantities of greenhouse gases from the seabed.

The biggest mass extinction of all occurred some 251 million years ago, when about 90 per cent of marine life and 70 per cent of land species vanished. One theory is that something happened to the Earth's atmosphere at the end of the Permian period, robbing it of vital oxygen.

It has happened before, so why worry?

There are several reasons we should be concerned. The first is that in the past it has taken life on Earth between 10 million and 100 million years to recover from a mass extinction. The second is that for all our technology, we still rely on the delicate ecological balance of the natural world for our survival. The Earth's biodiversity provides us with clean air, drinking water, food and even new drugs - upsetting it too much could cause the collapse of this vital life-support system.

The third reason is philosophical. If we conserve works of art, why should we not also conserve nature? The extinction of a humble beetle is no less important than the wilful destruction of a Rembrandt or a Picasso?

Should we be concerned about the rapid extinction of the Earth's species?

**Yes...**

\* Life is a delicate web of inter-related species: destroy too many and the entire fabric can come apart

\* The natural world is the planet's only life-support system, and if we lose that we lose our own lives as well

\* Protecting biodiversity is the moral equivalent to preserving human culture for future generations - it is not ours to destroy

No...

\* There are millions of species on Earth and the loss of a few won't matter too much

\* Life has bounced back in the past when there have been similar mass extinctions

\* We can live in a world of fewer species, provided we keep the ones that matter to us

promised to investigate. In 2003 the AP reported that UN officials were identified as using a ship chartered for 'peacekeepers' to traffic young girls from Thailand to East Timor as prostitutes.

In the same year it was also revealed that UN staff were guilty of raping women on a systematic scale in Sierra Leone.

In early 2002 a massive pedophilia scandal within the UN was uncovered involving sexual abuse against West African refugee children in Sierra Leone, Liberia and Guinea. UPI reported that Senior U.N. officials knew of the widespread pedophilia and not only did they not take action against the perpetrators, they covered up the atrocities.

while admitting he has neither read nor seen the script -- said that "my view was it would provoke a negative reaction in the Jewish community."

And philanthropist Bluma Appel, after whom CanStage's flagship theater is named, concurred. "I told them I would react very badly to a play that was offensive to Jews."

Bragg denies he was lobbied by the board in any way and insisted that "I pick the plays. No one on our board has ever told me what we can and can't do."

CanStage posted a \$700,000 loss last season and is currently facing a struggle after producing 10 plays in 2006, none of which met with critical or audience approval.
